*1. Locations having multiple functions as defined by their classification result in duplicate counts.
*2. Manufacturing plants with product development functions are called “mother plants,” and are core of our global production. Mother plants devise cost reductions when a new model is developed or at the time of model changes, as well as lead initiatives to strengthen Komatsu overall manufacturing capabilities, including at other plants that produce same models, components or parts.
*3. Excluding Japan and China.

Descriptions of locations

As of March 31, 2026

The descriptions of our locations are listed below.

Manufacturing locations	We have manufacturing plants for machinery in global locations where demand is high. Key components are developed and manufactured in Japan and supplied to manufacturing bases around the world so that we may offer customers the same high-quality and high-performance products globally. We also conduct global cross sourcing to address fluctuations in exchange rates and demand.
Sales locations	Our global sales locations support our distributors offer products and services to our customers around the world. Our sales and service distributors are highly-renowned entities in their region. We offer direct marketing and support through some of owned distributors in certain mining countries and parts of Europe, America and Asia.
Parts center	We have parts centers around the world to facilitate delivery of parts and components wherever our customers are located. All parts centers are connected to a parts management system that operates 24/7. This enables us to forecast demand and destination so that we may swiftly supply parts needed for repairs and exchanges.
Training center	Our training centers provide trainings for our customers to operate Komatsu products in a safe and efficient manner. They also train employees of our sales and service distributors as well as of the Komatsu group. The centers systematically train service engineers who are active globally and support customers and distributors.
Reman center	We promote the “Reman (remanufacturing) business” at our Reman plants/centers worldwide. “Reman business” involves remanufacturing the used engines, transmissions, and other components removed from construction and mining machinery that have been in operation at customer sites for a long period. We engage in various processes involving the collection, disassembly, cleaning, salvage, reassembly, and reuse of parts. We subsequently conduct performance tests, paint, and conduct shipping inspections before supplying the parts back to the market as newly manufactured components.
